

ITEM 6.4.3 | DATABASE STANDARDS

Database connectivity to some databases may not be possible due to driver/network restrictions at the location. Each participating agency/entity should collaboratively develop a plan governing the connection to, accessing, and formatting the data maintained in the particular database source. These databases should

- Be relational.
- Use ANSI SQL.
- Package appropriate database drivers with the database platform.
- Be secured using industry-proven algorithms, techniques, platform-supplied infrastructure, and vendor-tested and supported technologies.
- Be backed up per the Backup of Electronic Records standards in Section 8.5.
- Have a tested recovery plan.
